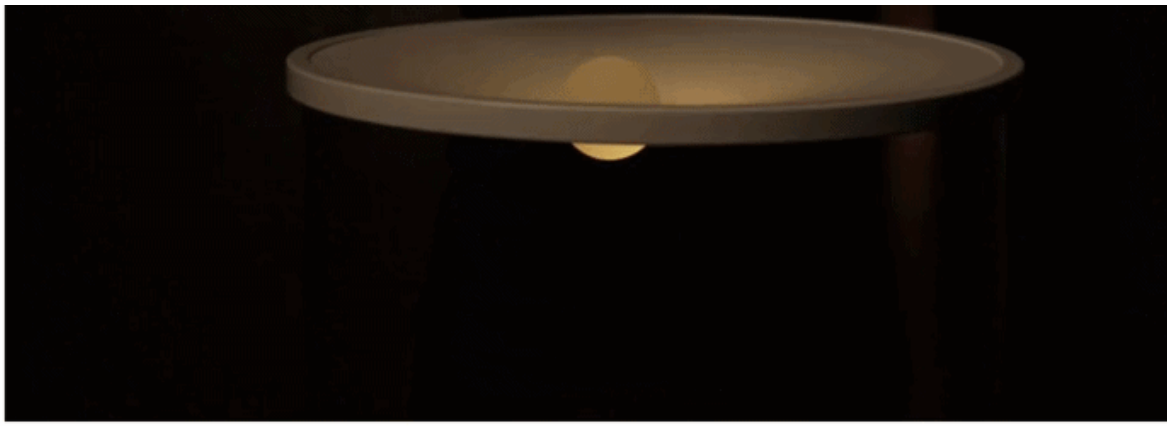
THE LIGHT EDIT

VOL 25. ISSUE 02

GRAMMOLUCE:
Light Guided by Gesture

Some lamps ask you to flick a switch. Grammoluce asks you to place a sphere. A design brief built around human interaction, from a brand known for consistent innovation and iconic forms.

Grammoluce by Martinelli Luce, exclusively available in India by IDS, is an addition to a series of gestural lighting objects by the brand.



THE IDEA

The weight of light

Weight and placement do the work, the light turning on, dimming, and shifting in quality through weight alone. Grammoluce collapses the act of dimming and switching into one single gesture unlike other lamps.

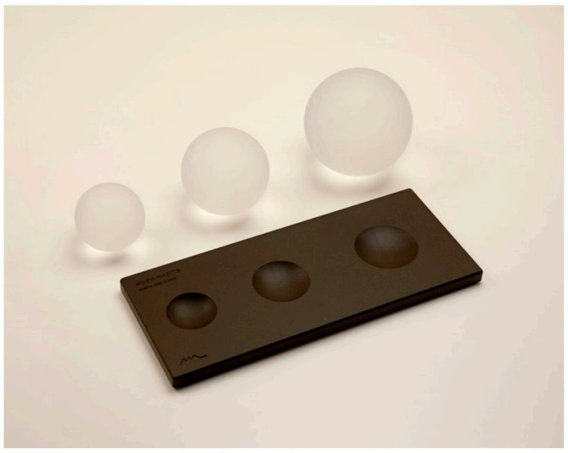
INSIDE GRAMMOLUCE

What holds the light



Designed by Min Dong of Habits Design

Made from aluminium, borosilicate glass, and an elastic Lycra membrane stretched taut acros the frame, the surface springs back with no memory of the last touch.

Three satin-finish glass spheres, from 0.3 to 1.3 kilograms, do the rest. Set the lightest one down and the light holds a soft, warm glow of 1800K. Add weight, and it climbs cooler and mo intense upto 3000K. Combine spheres, move them, and the lamp reads differently every time.

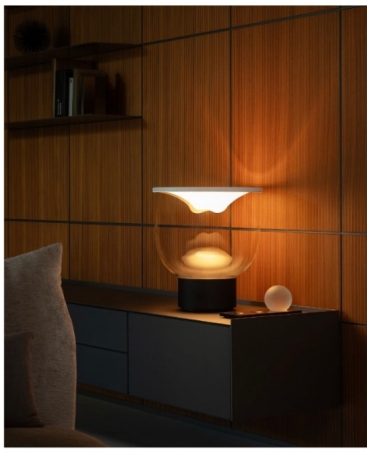
WHERE IT BELONGS



For spaces that shift through moods

It belongs on desks, consoles, and coffee tables built for more than one use across a day: a workspace by morning, a gathering point by night. It's for people who give decorative lighting the same weight as furniture, who see it as art in its own right. For them, a room is never fixed. It moves with the mood, and Grammoluce moves with it.
