THE LIGHT EDIT

VOL 28. ISSUE 01

LIGHTING THAT WORKS FROM THE STREET TO THE DESK.

Most commercial buildings are lit twice: once for the facade, once for the floor plate. The two are rarely designed together.

THE PROBLEM

A strong facade can still leave

the workplace overlooked.

- **The facade gets the budget** - The exterior is carefully designed, while the workspace defaults to a standard grid of lights.
- **Uniform light becomes the default** - The same lighting serves every area, regardless of the task, available daylight or time of day.
- **Glare gets overlooked** - Unshielded sources and reflections on screens can make an otherwise bright workspace uncomfortable.
- **The desk is an afterthought** - Lighting follows the ceiling grid rather than the furniture layout and the work happening below.

SEE IT DONE RIGHT →

> *Lighting should give a building presence on the street and make it comfortable to work in. Both belong in the same design brief.*
>

> CEO, Innovative Lighting Designs Ltd.

OUR APPROACH

Plan the facade and the workplace as one brief.

- **One plan, inside and out** - Facade and interior lighting are developed together, with each responding to its purpose and the building's architecture.
- **Light responds to the working day** - Lighting controls allow levels and, where appropriate, colour temperature to adjust to daylight, tasks and working hours.
- **Comfort is planned at the desk -** Shielded sources, considered fixture positions and layered light help control glare and screen reflections.

- **Lighting starts with the layout** - Fixture positions are coordinated with furniture and ceiling plans, with flexibility for future changes.

DISCUSS YOUR PROJECT →

Where do your ceiling grid and your desks disagree?

Send us a floor plan. We'll show you where.
